

Adjust-A-Spray™

Solid Brass, Adjustable Spray Showerheads

Powerful and Pleasing shower spray

Creates an adjustable conical spray pattern made up of many stream of water. The lever moves the face plate up and down which changes the diameter of the streams, the thinner they become the faster the water flow, the thicker, the slower. With this each user can adjust the spray force to what they like. The face plate also includes a ring of smaller holes to provide a soft spray in the middle of the conical spray pattern for full body coverage.

2.5 GPM Flow Rate

Adjust-A-Sprays are designed to provide a strong, invigorating shower spray with excellent rinsing force using only 2.5 Gallons Per Minute.

2 sizes to choose from

The smaller Standard FP3 models are 1-3/4" diameter at the face, the larger Elite FP4 models are 2-1/4"

Made of Solid Brass, 3 finishes

All major components, except sealing washers, are made of solid brass and designed to last a lifetime. Available in chrome, the large Elite series is also available in polished brass or brush nickel finishes.

Vandal Proof Option

Stainless steel set screws installed in the coupling that make it harder for some one to remove the shower from the shower arm.

The Power Boost Advantage

All *Adjust-A-Spray* Shower Heads include our *Power Boost Advantage*, a flow regulating system that allows the user with lower water pressure to adjust the force, and flow rate, of the shower insuring a good quality shower at an energy and water saving flow rate of 2.5 Gallons Per Minute (GPM). The federal government has regulations that require all showers sold in the U.S. use no more than 2.5 GPM at 80 psi - flowing. Because very few people have water pressure that high, and the lower your water pressure the lower your flow rate, we developed our Power Boost system to insure those with lower water pressure can still get a good, enjoyable shower flow. This system consists of a series of 3 brass flow restricting discs installed in the shower head, each with a slightly larger thru hole. If you find the shower as is is too weak then simply remove the top restricting disc and try it that way, if it is still to weak, remove the next, etc. etc.

Adjust-A-Spray™ brass adjustable shower

FP3B	Std. Adjust-A-Spray shower head, boxed	24.96
FP3C	Std. Adjust-A-Spray shower head, carded	25.96
FP3VP	Std. Adjust-A-Spray shower head, vandal proofed	27.96
